data mounts

data mounts

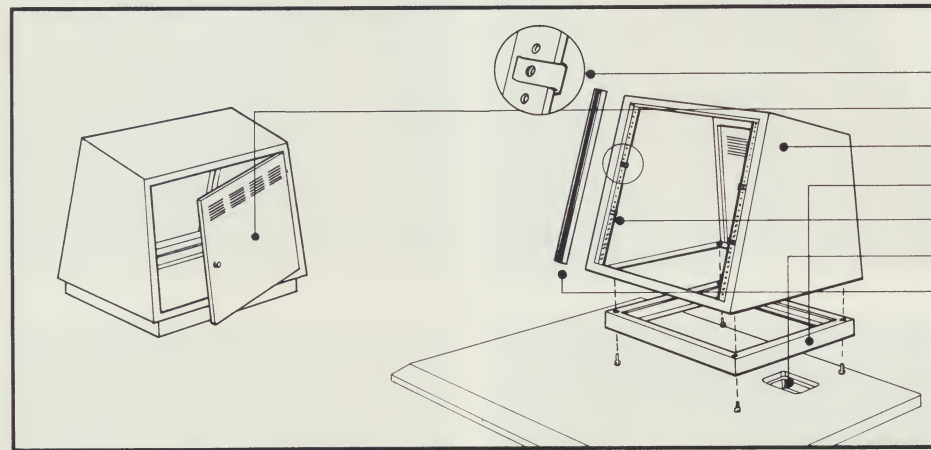

The Data Mount 1000 Series are sloped consoles designed for desk top mounting. Ideal for mounting tape drives, control panels, display panels, or any equipment requiring desk top convenience. Data Mounts are available in three rack height models. All Data Mounts have standard 19" retma mounting, hinged rear doors, and shadow box bases. The units can be ordered with cable holes in the top to provide cabling down to electronics housed below the desk. In addition, Data Mounts can be ordered with decorative trim and a wide variety of standard designer colors to complement any interior decor.

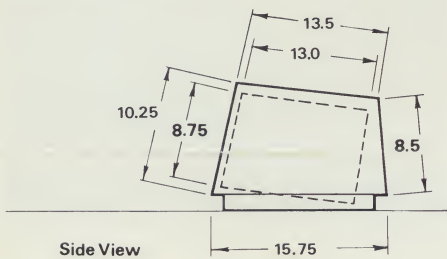

If we do not have the colors or options you need, you can look to our design and engineering staff to help solve your requirement. Service is not an option at Systems Furniture Company, it is a standard feature.
